Mobile App.

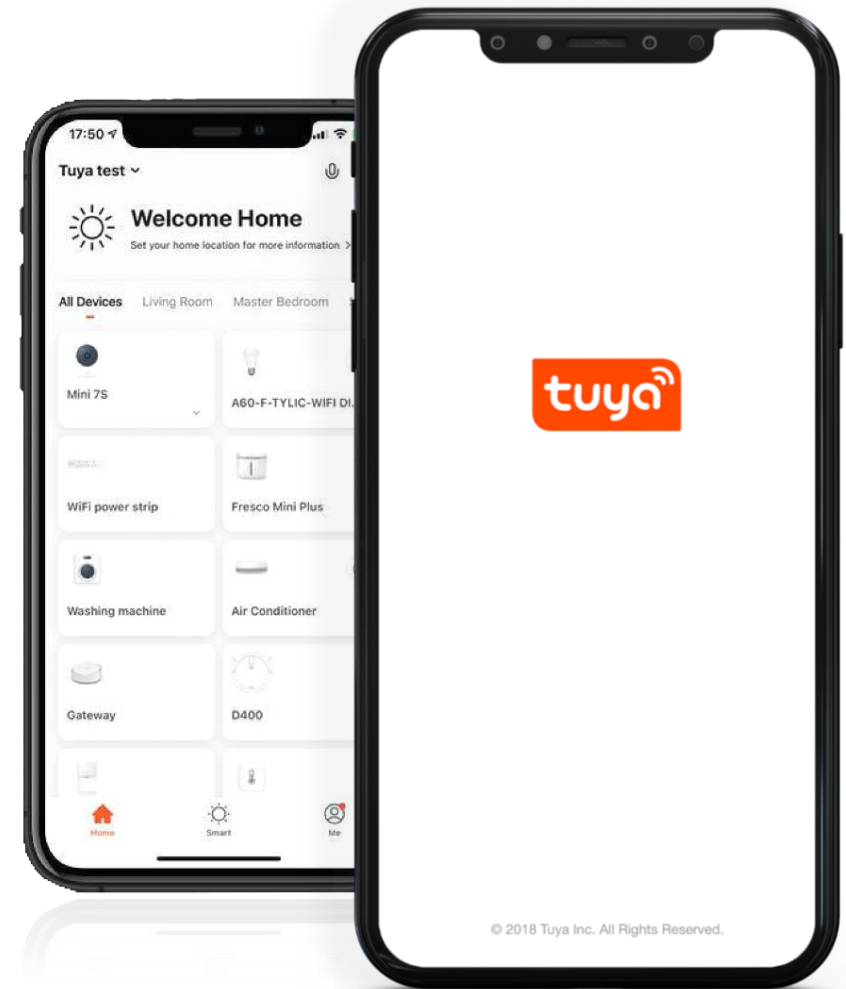

Control your home from **ONE APP.** from anywhere with your smartphone or voice commands.

android

iOS

Wireless Communication Protocols

All the following products are available in 2 protocols

Wi-Fi

Wi-Fi connects diverse smart home devices, offering widespread compatibility but potentially facing congestion with many devices.

Zigbee

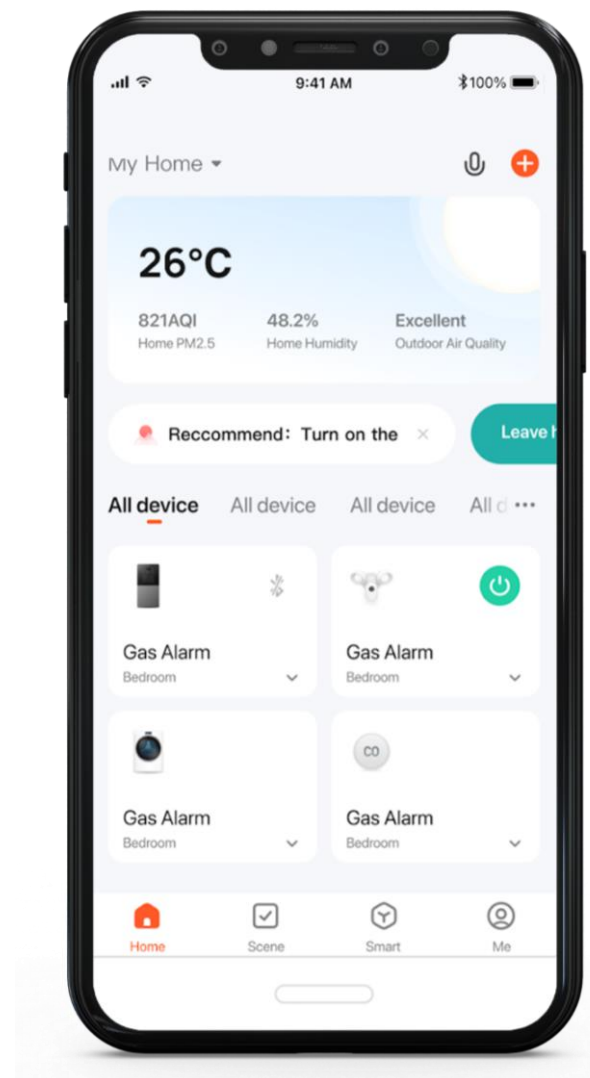

Zigbee connects your smart home devices with low power and reliable communication.

Smart Safety and Security

These systems offer features like **remote monitoring, automatic alerts, and even preventative actions** to keep you and your property safe.

- 1- Smart valve
- 2- Door window sensor
- 3- Vibration sensor
- 4- Gas sensor
- 5- Smoke sensor
- 6- Water sensor
- 7- Motion sensor
- 8- Siren

Smart Access

Smart Access can be Door Motor and Smart Door Locks

Several models can be unlocked through your :

Smartphone

Fingerprint

Password

Access Cards

Face Recognition

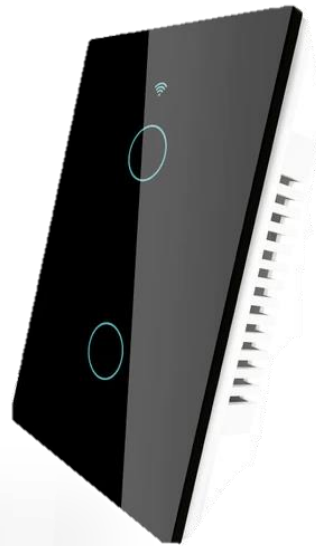

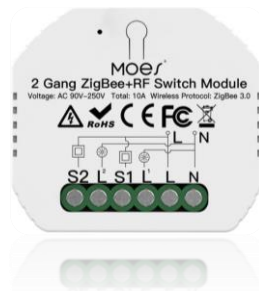

Traditional keys

Smart Lighting

Smart lighting makes you control your lights remotely using your smartphone, tablet, or voice assistant.

- 1- Smart Light Switch
- 2- Mini Smart Switch
- 3- Smart Bulb
- 4- Smart Plug

Smart Conditioning

This goes beyond simple on/off functionality, allowing features like remote access, scheduling, and automatic adjustments based on factors like temperature, humidity, and even your location.

Universal IR
Remote control

Smart Thermostat

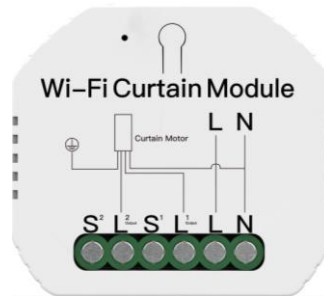

Smart Blinds

Smart blinds are like magic curtains. Control them with your phone, set schedules to open and close automatically.

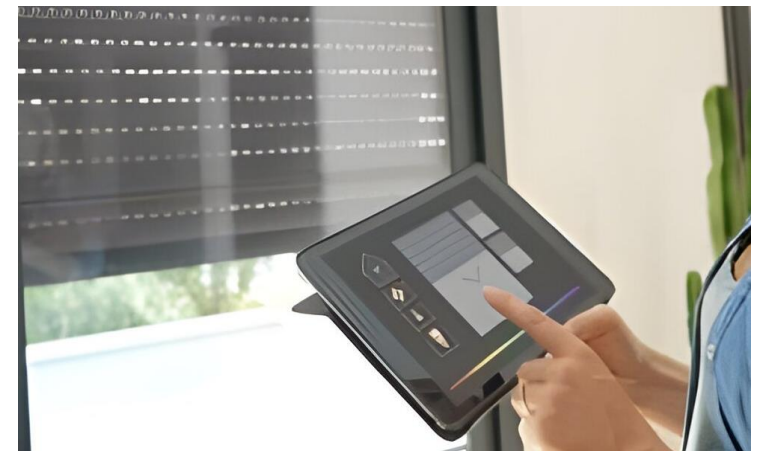

Curtain Kit

Mini Curtain

Shutter Switch

Smart Control Panels

Tuya (4" – 6" – 7" – 8" – 10")

Act as the brain of your smart home. Imagine a central hub that allows you to manage all your connected devices, like lights, locks, and thermostats. This simplifies control and lets you create automated routines for ultimate convenience and security.

•Zennio

Passion for KNX innovation

Zennio is a leading manufacturer specializing in KNX automation solutions. Their products, ranging from touch panels to lighting systems and thermostats, are designed to seamlessly integrate into smart homes and buildings. With a focus on innovation and design, Zennio offers functionality, performance, and aesthetics for a complete home automation experience.

Z41 LITE
Full local control

The qualitative leap we were waiting for!

Full control of any installation with end user flexibility to program their own scenes, sequences using macros, timers for screen controls...

Z41 PRO
Remote control via
Z41 Remote app

Home sweet home... At your fingertips and under control

Smartphone control with the same interface as the touch panel to make control easier and more intuitive.

Z41 COM
Video intercom
functionality

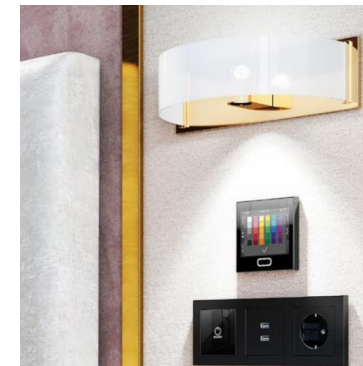

Full management and control for any building

Video intercom remote answering and opening so you really have full control of your installation.

Room Controller

Intuitive screens with the latest capacitive technology to enjoy and obtain the highest performance in any room with a modern and elegant design. Its straight shaping fits perfectly into any deco and matches Zennio switches

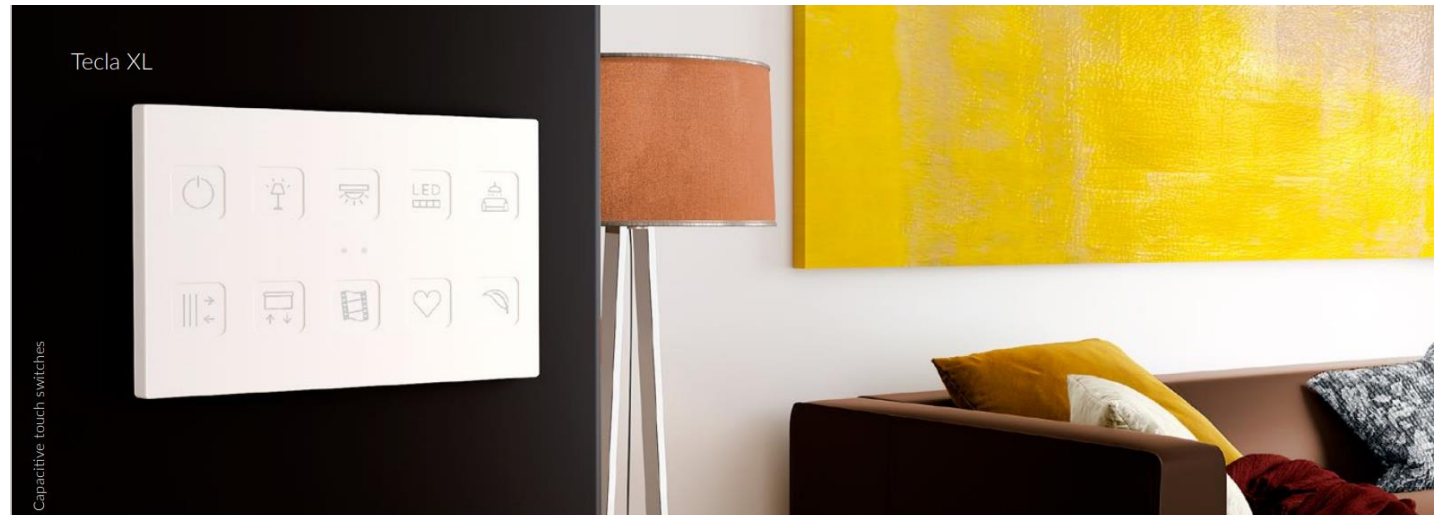

Glass capacitive switches,

Fully customizable according to your own style so you can choose the buttons and functions that you need in each room. Do you want it with or without a display? How many buttons? From a minimalistic design to a fully personalized one, pick the one that better meets your requirements. With backlit icons according to ambience luminosity so you can enjoy a relaxing and pleasing environment

Capacitive Touch Switches

Enjoy distributed control with the Tecla family to meet all your requirements. Its polycarbonate simplified aesthetics with a complete range of backlit icons allows for a one of a kind user experience. Tecla brings simplicity to another level offering a discreet integration into any environment.

Wall- mounted Motion Detector

Run any desired function with just moving thanks to the 180° wall-mounted motion detector. Combine it with switches and electrical accessories and it will be discreetly integrated in any ambience

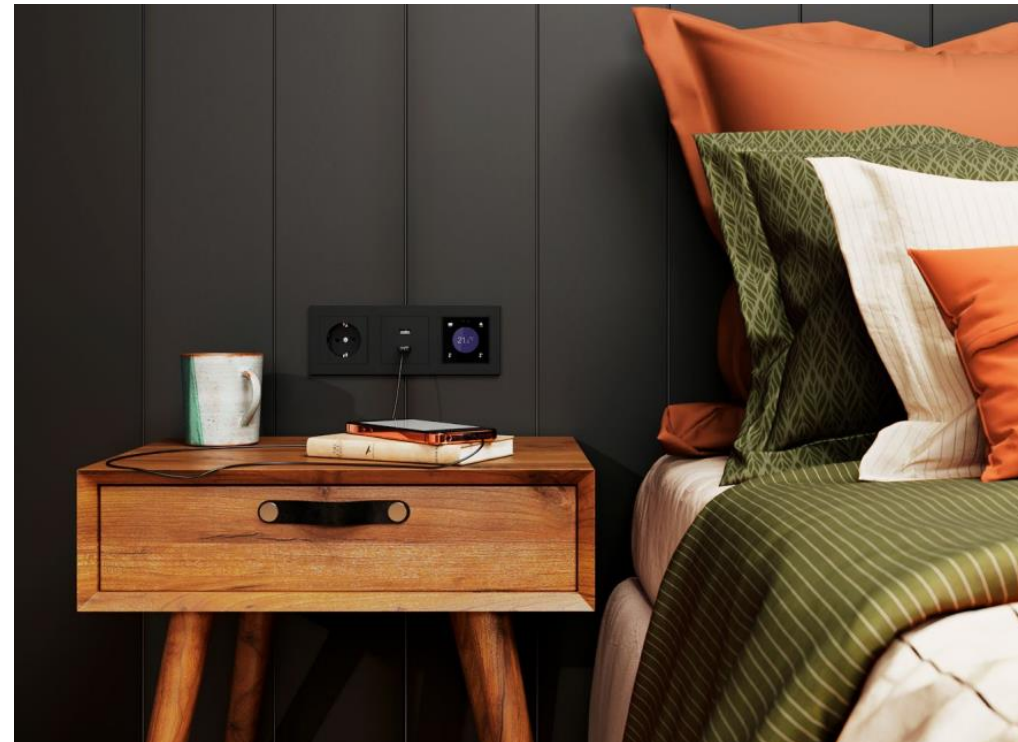

Much more than a motion detector !

Control any function with the additional backlit buttons in Presentia W1 and Presentia W2 models. Choose between personalized or standard icons according to your control requirements

Switches and Sockets

Complete your smart home installation with the electrical accessories that better combine with the touch panels, displays and touch switches. With timeless designs and flush-fitted into the frames. Combine them as you wish.

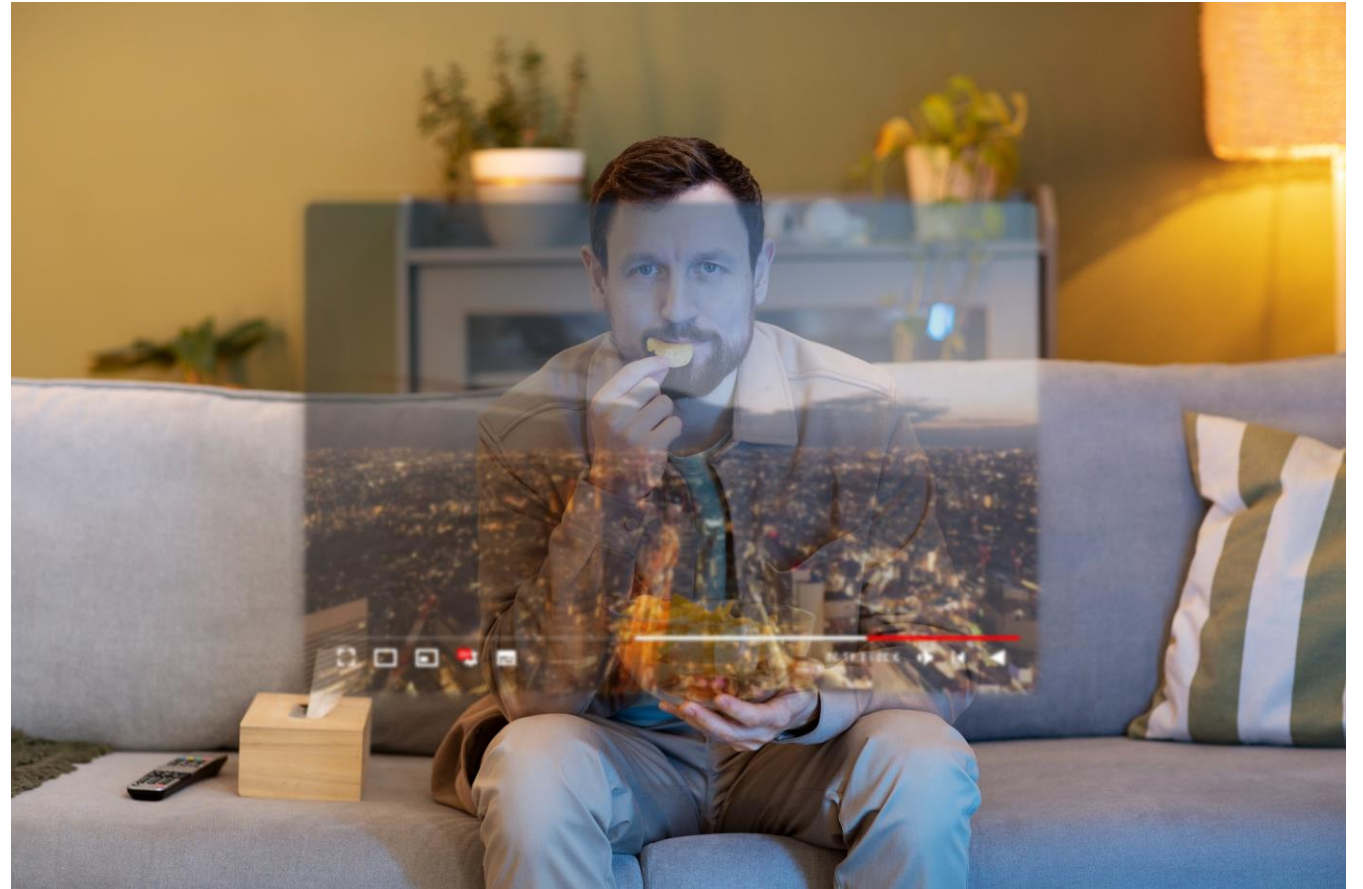

Where the magic is done!

Actuators A complete range of the most powerful actuators in the market. In the following pages, you will discover the non-visible part of KNX installations. Actuators for HVAC, lighting, shutter control, multifunctional, all-in-one solutions, multimedia, energy monitoring...

Smart Entertainment

Enjoy powerful audio and captivating visuals, creating a truly **immersive entertainment environment**.

JBL Soundbars

Are known for their high-quality audio and ability to significantly improve the sound experience from your TV. They come in a variety of configurations, from basic 2.0 channel setups with a soundbar and a wireless subwoofer to immersive surround sound systems with multiple speakers and powerful subwoofers.

This allows you to choose a soundbar that meets your needs and budget, transforming your living room into a home theater for movies, music, and gaming.

A home theater with a projector

Offers a cinematic experience in the comfort of your own home. Projectors replace the traditional TV with a large projected image, creating a more immersive viewing experience.

Combined with a sound system and other audio-visual equipment, it can create an audio-visual experience comparable to a cinema.

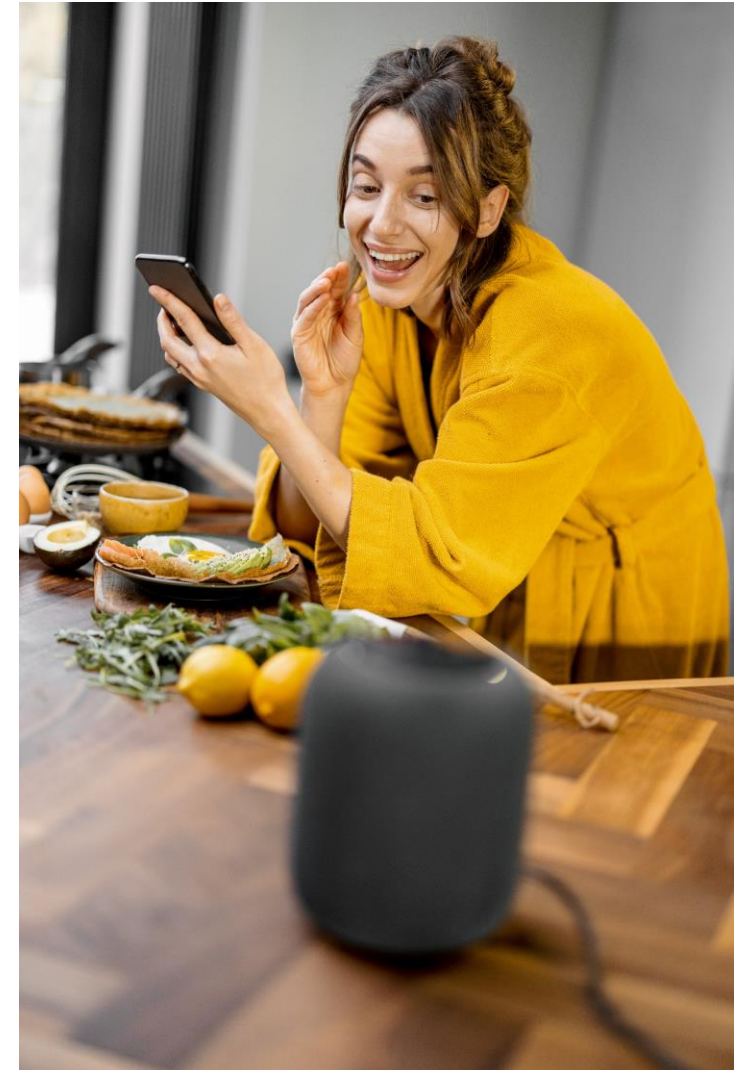

Voice Commands

Enjoy the freedom of hands-free control,
making daily tasks and managing your
home easier than ever.

Alexa,

The voice assistant behind Amazon Echo devices, understands your spoken commands. Simply say "Alexa" followed by your request, like playing music, dimming the lights, or checking the weather. This hand-free control lets you interact with your smart home and access information effortlessly.

Google Nest

Google Assistant is a virtual assistant developed by Google, available on various devices like smartphones and smart speakers. It uses voice commands to help you with daily tasks like setting reminders, playing music, controlling smart home devices, and answering your questions using information from the web.

Light Current

CCTV

Video intercom

Network

Closed-circuit television (CCTV) cameras

Are video surveillance systems that transmit a video signal to a specific set of monitors or recording devices. Unlike broadcast television, the video is not publicly broadcasted.

These cameras are commonly used for security purposes in homes, businesses, and public areas. They deter crime, provide evidence in case of incidents, and allow for remote monitoring of activities.

Video Intercom

A smart video intercom system combines a traditional intercom with video capabilities. It allows you to see and talk to visitors remotely through a high-definition camera, using a smartphone app or a dedicated indoor monitor. This enhances security by enabling you to identify visitors before granting access to your property, even when you're not physically present.

The Unsung Heroes of Smooth Performance!

A network switch acts like a traffic director for your devices on a network. Instead of data flooding all connected devices, the switch efficiently sends information only to the intended recipient, improving network performance and security.

Network Switch

Mesh-Technology Access Point

Goodbye Dead Zones!

A mesh-technology access point expands your Wi-Fi coverage by creating a web of interconnected devices. Unlike traditional access points with limited range, these points work together to blanket a larger area with a strong, consistent wireless signal.
